Utilities and Energy

N-3 Small Wireless Facility Siting

The fifth generation of mobile communication network, referred to as 5G, will be deployed primarily through a network of small wireless antennas. With each new generation of wireless networks, cellular and Internet connection speed has improved. 5G is projected to increase connection speed, possibly enabling speed ten times faster than current 4G networks. It is also projected to increase connectivity and capacity, allowing more people to communicate using their devices at the same time. In an effort to accelerate deployment of next generation cellular technology, the Federal Communications Commission (FCC) approved a *Declaratory Ruling and Third Report and Order* (Report) addressing 5G siting in the United States on September 26, 2018. This article reviews certain sections of the Report and addresses how the Report may impact Kansas law.

**FCC Declaratory Ruling and Third Report and Order Overview**

The FCC states the purpose of the Report is to:

- Clarify the scope and meaning of the “effective prohibition” standards set forth in Sections 253 and 332(c)(7) of the Telecommunications Act of 1996 (Act) as they apply to state and local regulation of wireless infrastructure deployment;
- Conclude Sections 253 and 332(c)(7) limit state and local governments to charging fees that allow for cost recovery only for processing applications and managing structures in rights-of-way;
- Identify specific fee levels for small wireless facility deployments that comply with the relevant standard;
- Provide guidance on certain state and local non-fee requirements, including aesthetic and undergrounding requirements;
- Establish new “shot clocks” for small wireless facilities (“shot clocks” refers to timeliness for a municipality to review small wireless facility applications);
- Codify existing shot clocks for non-small wireless facility deployments established by the 2009 Declaratory Ruling (not discussed in this article);
● Clarify all state and local government authorizations necessary to deploy personal wireless service infrastructure are subject to these shot clocks; and

● Establish a failure to act within the new small wireless facility shot clocks constitutes a presumptive prohibition on the provision of services, and set the expectation that local governments shall provide all required authorizations without further delay.

The FCC states its intent is to “promote the timely build out of new infrastructure across the country by eliminating regulatory impediments that unnecessarily add delays and costs to bringing advanced wireless services to the public.” Further, the FCC states, “America is in a transition to the next generation of wireless service,” and this action “is the next step in the FCC’s ongoing efforts to remove regulatory barriers that would unlawfully inhibit the deployment of infrastructure necessary to support these new services.”

According to the National Conference of State Legislatures, the Report places new limits on local wireless infrastructure siting review and has the potential to preempt the 20 states, including Kansas, that have enacted small cell legislation.

**Standard for Determining Effective Prohibition of Service**

One of the expressed purposes of the Report is to clarify the FCC’s interpretation of the term “effective prohibition,” found in Sections 253 and 332(c)(7) of the Act. The Report states effective prohibition occurs where a state or local legal requirement materially inhibits a provider’s ability to engage in the activities related to its provision of a covered service (Para. 37). This would include both inhibiting additional services or improving existing ones.

**Fees**

Another purpose of the Report is to resolve confusion regarding limits on state and local fees. The Report states right-of-way access fees and fees for the use of government property in the right-of-way, as well as application or review fees and similar fees imposed by a state or local government as part of their regulation of the deployment of small wireless facilities inside and outside the right-of-way, violates Sections 253 and 332(c)(7) of the Act unless the following conditions are met:

● The fees are a reasonable approximation of the state or local governments’ costs;

● Only objectively reasonable costs are factored into those fees; and

● The fees are no higher than the fees charged to similarly situated competitors in similar situations (Para. 50).

The Report prescribes the following fee structure that the FCC believes would not violate Sections 253 and 332(c)(7) of the Act:

● $500 for a single up-front application that includes up to five small wireless facilities with an additional $100 for each additional facility; and

● $270 annually per small wireless facility for all recurring fees (Para. 79).

**Aesthetic Requirements**

The Report also uses the FCC’s interpretation of Sections 253 and 332(c)(7) of the Act to provide guidance on certain potential regulations imposed by local governments.

Regarding aesthetic regulations, the FCC clarifies in the Report that requirements must meet the following three criteria to be permissible under the Act:

● Be reasonable;

● Be no more burdensome than those applied to other types of infrastructure deployments; and

● Be objective and published in advance (Para. 86).

The Report indicates some jurisdictions have adopted blanket ordinances or regulations requiring all wireless facilities to be deployed under ground, some for aesthetic reasons (Para. 90). The FCC clarifies this would amount to an
effective prohibition due to the characteristics of wireless signals and violate Sections 253 and 332(c)(7) of the Act.

Minimum spacing requirements are addressed in the Report (Para. 91). The FCC clarifies spacing requirements that prevent providers from replacing preexisting facilities or collocating equipment would be unreasonable. An example of this would include requiring facilities be sited a certain minimum distance away from other facilities.

**Review Deadlines and Remedies**

The Report establishes the following new shot clocks or timelines for a municipality to review small wireless facility applications:

- 60 days for an application for collocation of small wireless facilities on preexisting structures; and
- 90 days for an application for new construction of small wireless facilities (Para. 105).

In the Report, because small wireless facilities are likely to be deployed in large numbers as part of a system to cover a particular area, the FCC anticipates some providers will submit batched applications (Para. 113). "Batched" is defined as multiple separate applications filed at the same time, each for one or more sites or a single application covering multiple sites. As a result, the FCC states, with regard to the new shot clocks, these types of applications should follow the same rules as if the applications were filed separately (Para. 114). In addition, if an application contains both sites for collocation and new construction, it should adhere to the longer 90-day shot clock.

These shot clocks are being established under the FCC interpretation of Section 332 of the Act. The FCC notes these shot clocks are similar to shot clocks adopted in a Declaratory Ruling issued by the FCC in 2009 for non-small cell wireless facilities (which have been further clarified by the Report, but are not addressed in this article). The FCC notes the 2009 shot clocks were affirmed by the Fifth Circuit and the U.S. Supreme Court in *City of Arlington v. FCC* in 2013.

The Report clarifies failure to adhere to the small wireless facility shot clock deadlines is considered a presumptive prohibition of service, violating Section 332 of the Act, and an applicant would be able to seek relief in court through a preliminary or permanent injunction (Sec. B Paras. 116-131).

**Kansas Law**

Senate Sub. for HB 2131 (2016) established application processes, limitations, and construction procedure for operating and maintaining small cell equipment in the public right-of-way.

**Kansas Fees**

Under KSA 66-2019, authorities cannot charge an application fee, consulting fee, or other fee associated with the submission, review, processing, and approval of an application that is not required for other wireless infrastructure providers or wireline telecommunications or broadband providers in their jurisdiction.

Further, the law states an authority (defined as any governing body, board, agency, office, or commission of a city, county, or the state that is authorized by law to make legislative, quasi-judicial, or administrative decisions concerning an application) can only assess fees for the actual costs relating to granting or processing an application that are directly incurred. This portion is in line with what is required by the FCC Report.

Kansas law also limits the amount an authority can receive from application charges and fees to:

- $500 for a collocation application that is not a substantial modification, small cell facility application, or distributed antenna system application; or
- $2,000 for an application for a new wireless support structure or for a collocation application that is a substantial modification of a wireless support structure.
As noted above, the Report allows for a maximum application fee of $500 for the first five sites and $100 for every site thereafter. There is no distinction between collocated sites and new support structures in the Report.

Kansas law also allows for small cell network applications with no greater than 25 individual facilities of similar design within a jurisdiction of a single authority to file a consolidated application and receive a single permit for the installation, construction, maintenance, and repair of the network instead of filing separate applications for each.

An authority also has the ability to enter into a lease with an applicant for the use of public lands, buildings, and facilities. The lease must be at market rate and at least ten years in duration, unless otherwise agreed to by both the applicant and the authority. Charges for placement of wireless facilities on public lands, if the authority chooses to charge, are required to be competitively neutral and not unreasonable, discriminatory, or in violation of current federal or state law. The FCC’s Report suggests a reoccurring fee of no more than $270 per facility would be acceptable when determining if such a fee creates an “effective prohibition” under the Act.

In 2019, the Legislature passed SB 68, which prohibits a city from requiring a wireless service provider or wireless infrastructure provider to enter into a franchise, franchise agreement, franchise ordinance, contract franchise, or contract franchise ordinance for the provision of wireless services. The law allows a city to assess a wireless service provider or wireless infrastructure provider a fixed right-of-way access fee for each small cell facility deployed that requires the use of the city’s right-of-way. SB 68 also clarifies a city would still be able to govern the use of its right-of-way though certain agreements.

**Kansas Aesthetic Requirements**

Kansas law states an authority has the right to prohibit the use or occupation of a specific portion of the public right-of-way due to reasonable public interest necessitated by public health, safety, and welfare so long as such interest is exercised in a competitively neutral manner and is not unreasonable or discriminatory. Kansas law further states a wireless services provider or wireless infrastructure provider, subject to an application, shall have the right to construct, maintain, and operate wireless support structures, utility poles, small cell wireless facilities, or distributed antenna systems along, across, upon, under, or above the public right-of-way. The limitation of access for aesthetic reasons is not expressly stated in statute. The authority must be competitively neutral with regard to other users of the public right-of-way, may not be unreasonable or discriminatory, and may not violate any applicable state or federal law, rule, or regulation.
The chart below compares certain requirements found in the FCC Report and Kansas law.

<table>
<thead>
<tr>
<th>Requirement</th>
<th>FCC</th>
<th>KSA 66-2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Co-location Application Fee</td>
<td>$500 for the first five facilities, $100 for each beyond initial five</td>
<td>$500 for non-substantial modification to existing structure. $2000 for substantial modification</td>
</tr>
<tr>
<td>New Structure application Fee</td>
<td>$500 for the first five facilities, $100 for each beyond initial five</td>
<td>$2,000</td>
</tr>
<tr>
<td>Batched Application Fee</td>
<td>$500 for the first five facilities, $100 for each beyond initial five</td>
<td>$500 or $2000 depending on application. Can only be applied for by a network with 25 or less individual facilities.</td>
</tr>
<tr>
<td>Co-location Application Review</td>
<td>60 days</td>
<td>90 days</td>
</tr>
<tr>
<td>New Structure Application Review</td>
<td>90 days</td>
<td>150 days</td>
</tr>
<tr>
<td>Batched Application Review</td>
<td>90 or 150 days depending on if the application requires construction of a new wireless support structure</td>
<td>60 calendar days for networks with 25 or less individual facilities</td>
</tr>
